## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: Reference sign "43" of Figure 5 is not mentioned in the description. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen (US 6479937).

4. Regarding independent claim 1, Figure 5 of Chen shows a cathode ray tube having a longitudinal axis, a phosphor screen (76), an electron gun (106) arranged around the longitudinal axis, the electron gun comprising a triode part having three cathodes (108, 110, 112) for generating a red, a green, and a blue electron beam,

respectively, and two common grids (114, 116) arranged transversely to the longitudinal axis, characterized in that the cathode for generating the green electron beam is offset from the longitudinal axis. The Examiner notes that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense.

5. Regarding claim 2, Figures 5-10 of Chen show the green cathode lying in one plane with the red and blue cathode, the plane including the longitudinal axis.

6. Regarding claim 3, Figures 5-10 of Chen show that the green cathode lies in one plane with the red and blue cathode, the plane being parallel to, and spaced apart from, the longitudinal axis.

7. Regarding claim 4, Figures 5-10 of Chen show that the red and the blue cathode lie in one plane, and that the green cathode is spaced apart from the plane.

8. Regarding claim 5, Figures 5-10 of Chen show that the plane is parallel to, and spaced apart from, the longitudinal axis.

9. Regarding claims 6-9, the Examiner notes that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense.

### ***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lange (US 4374609) discloses an image projection screen with decreased color shift.
